Draw

Learn how to freely draw 3D Guides as if sketching.

Draw 3D Guide

Draw freely on the 3D Guide. Imagine the shape you want before drawing your curves, and create a surface for your drawing.

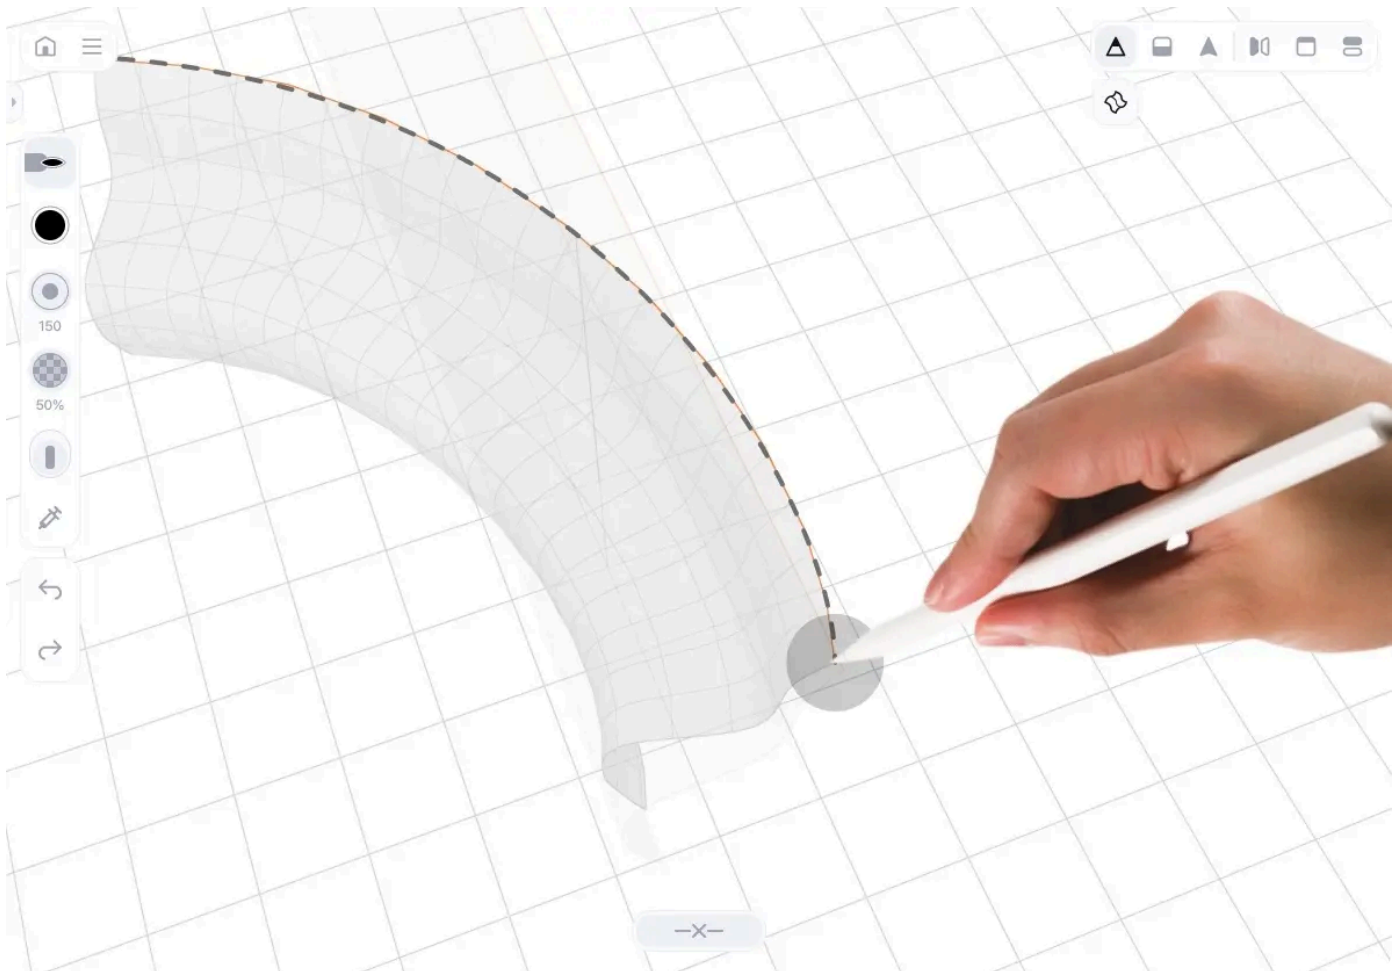

Draw with Pen

Create 3D Guide as if you're drawing with a pen.

Tap the Draw icon and set the bottom context menu to Draw. Then, use your pen to draw on the screen, and the 3D Guide will be created. The 3D Guide is generated perpendicular to your viewing angle and varies based on your [Field of View\(FOV\)](#).

3D Guides can only be drawn with a pen. If you don't have a stylus, enable [Finger-Pen](#).

Bend 3D Guide

Bend an existing 3D Guide to create more organic shapes, revolve, or make a tube.

While a 3D Guide is active, tap the Bend icon below the Draw icon. Then, use your pen to draw on the screen, and the 3D Guide will bend along the drawn line.

The bending starts from the orange line, which is the starting point of the 3D Guide. You can repeat the Bend 3D Guide process multiple times.
