

Documentation > Brushes > Color

Color

Learn how to change colors and sample colors using the eyedropper tool.

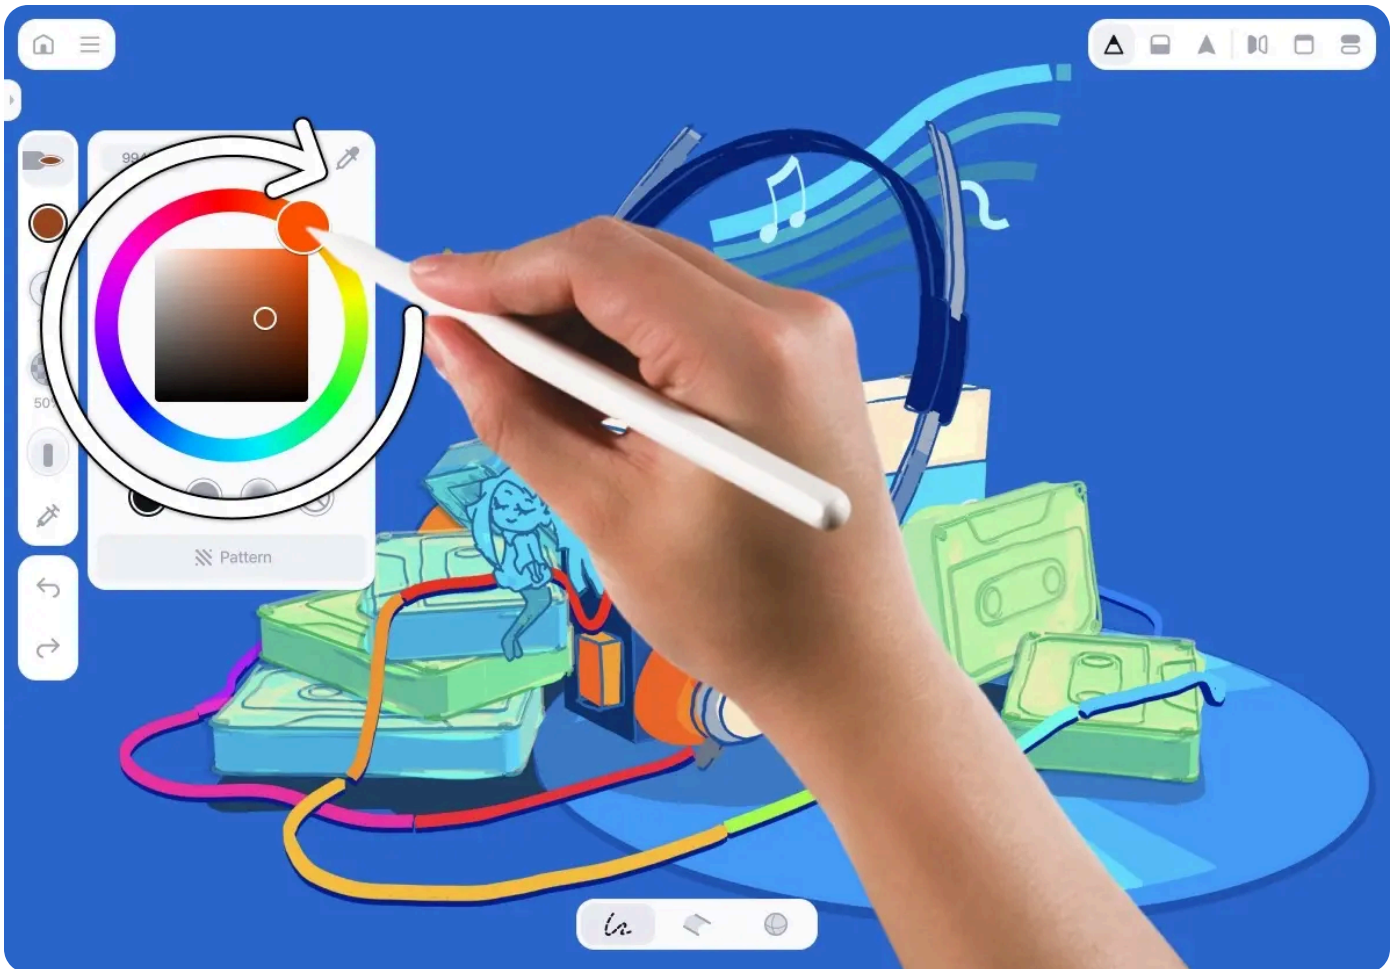

Color Panel

Every 3D curve in Feather is born with color. Choose your desired colors freely and create colorful 3D drawings.

Open Color Panel

Tap the Active color in the Brush Panel on the left side of the screen to open the Color Panel. Tap it again to close the Color Panel.

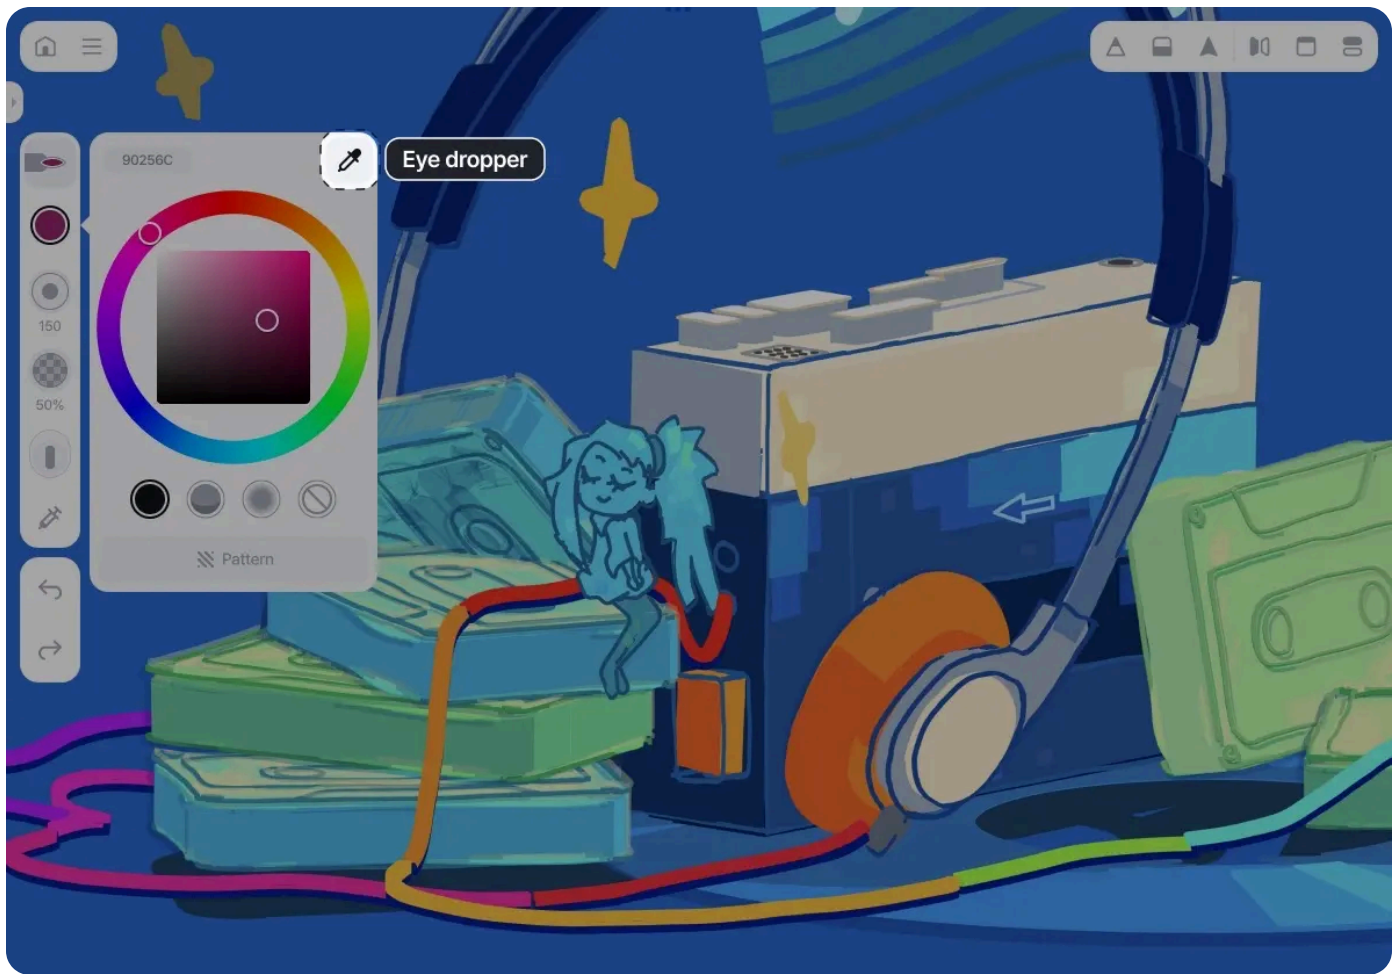

Choose a Color

Tap and spin the color wheel to adjust the hue. Tap and drag within the square to adjust the saturation and brightness. The currently selected color will appear as the Active Color and the brush color. You can also adjust the color after drawing a curve by using the [Select and Deselect](#).

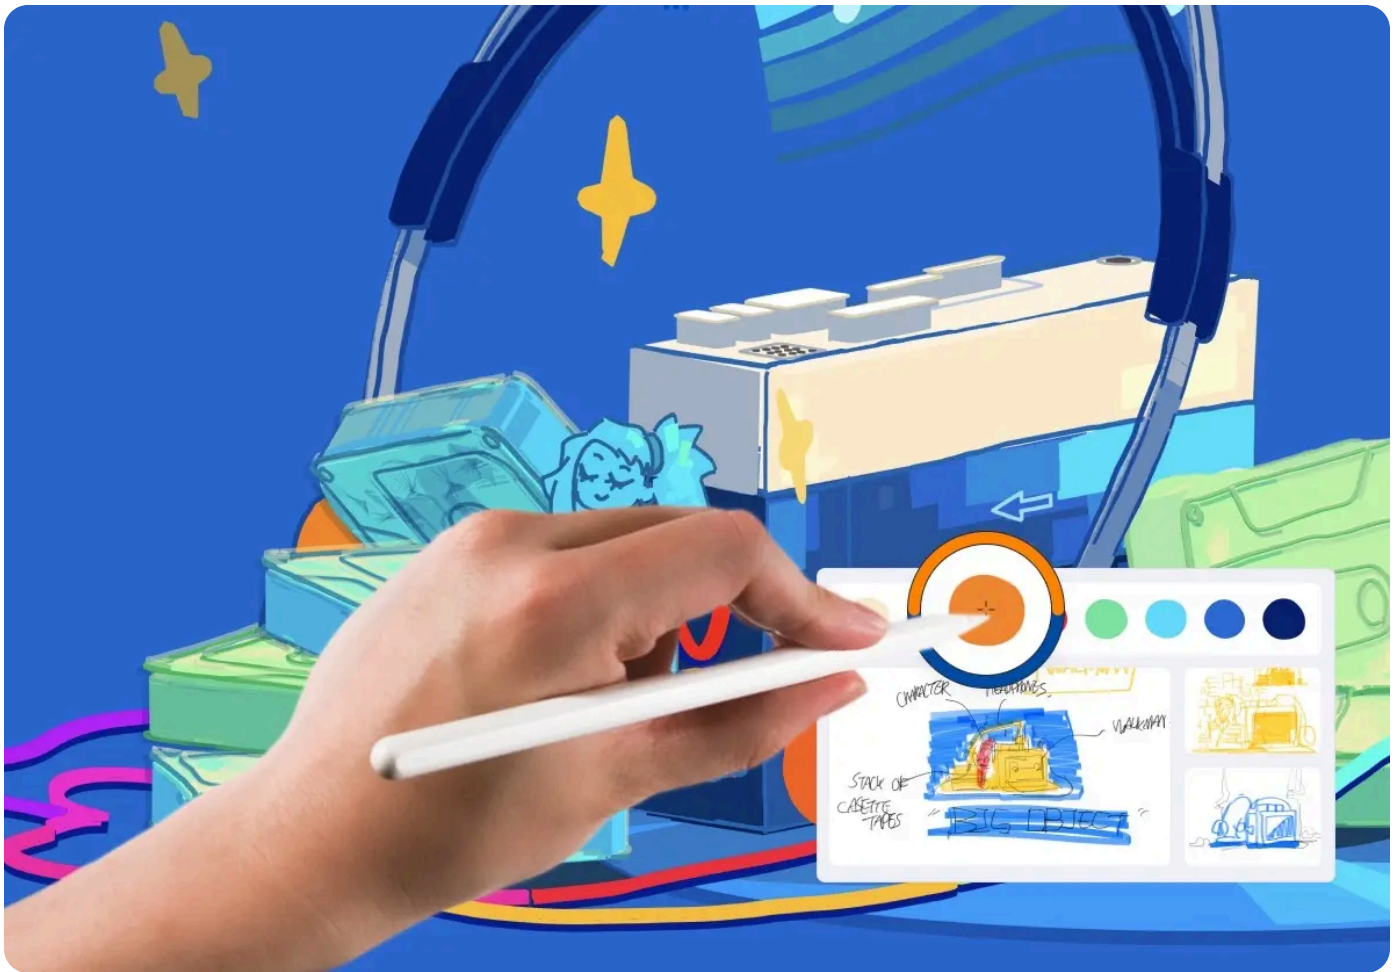

Eyedropper

Sample new colors from reference images or drawn curves

Tap Eyedropper in Color Panel

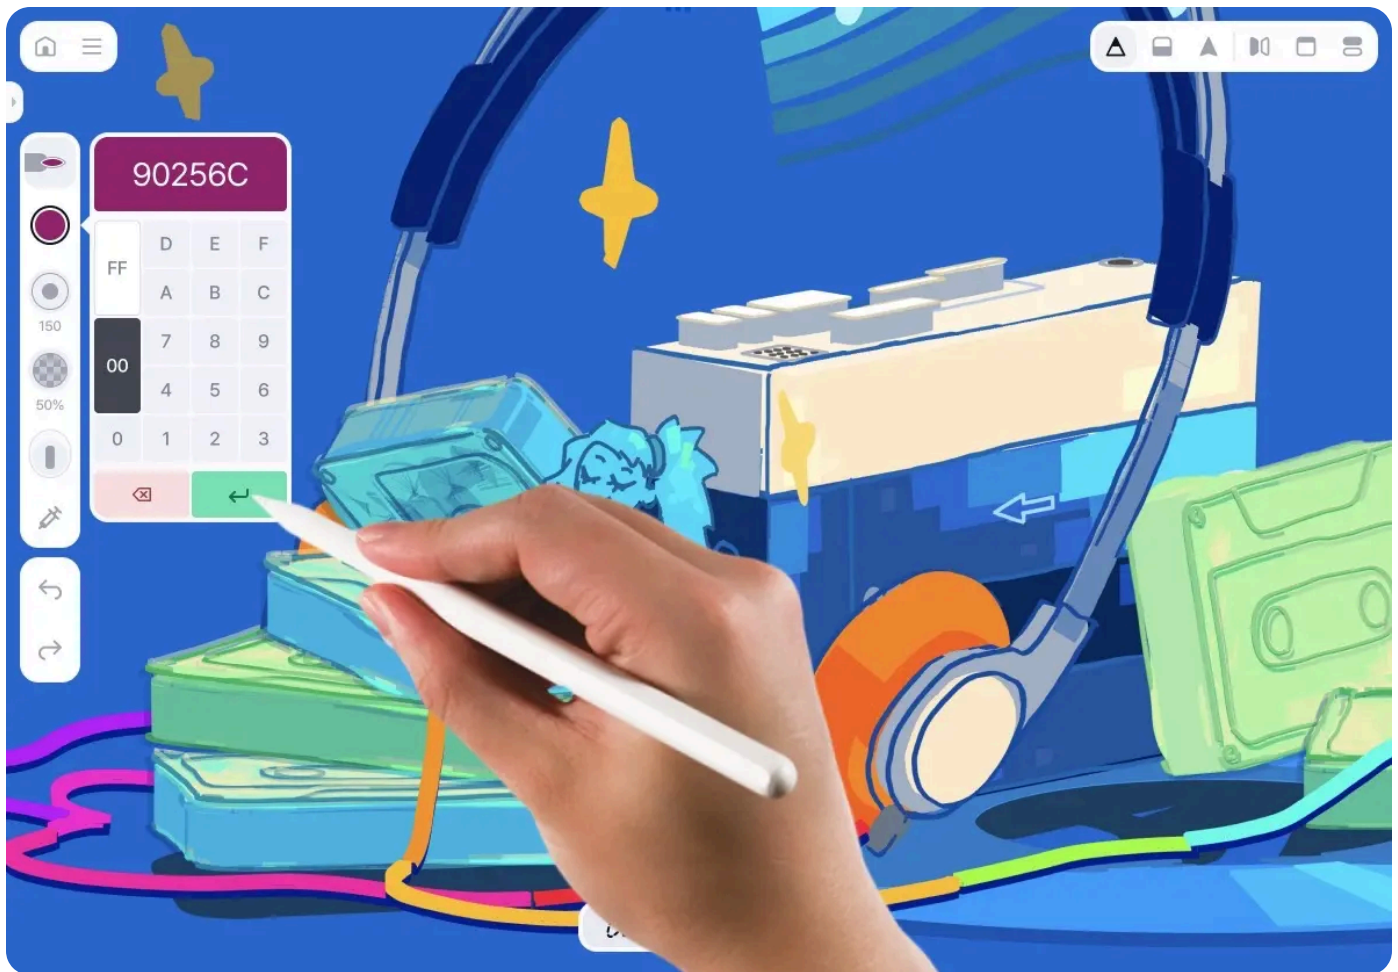

Tap the Eyedropper on the right side of the Color Panel. When the Eyedropper turns black, it's ready to sample colors.

Sample from Clipboard or Curves

You can sample new colors from the drawn curves or reference images in the clipboard. The curve you want to sample from must be in the currently [Active Group](#).

Learn more about the [Clipboard](#).

Tap Hex Code to Input

Tap the hex code to open the input pad for entering a hex code. After entering the hex code, tap the confirm button to apply the new color.
