

Documentation > Extensions > Export

Export

Learn how to export your sketches in different formats.

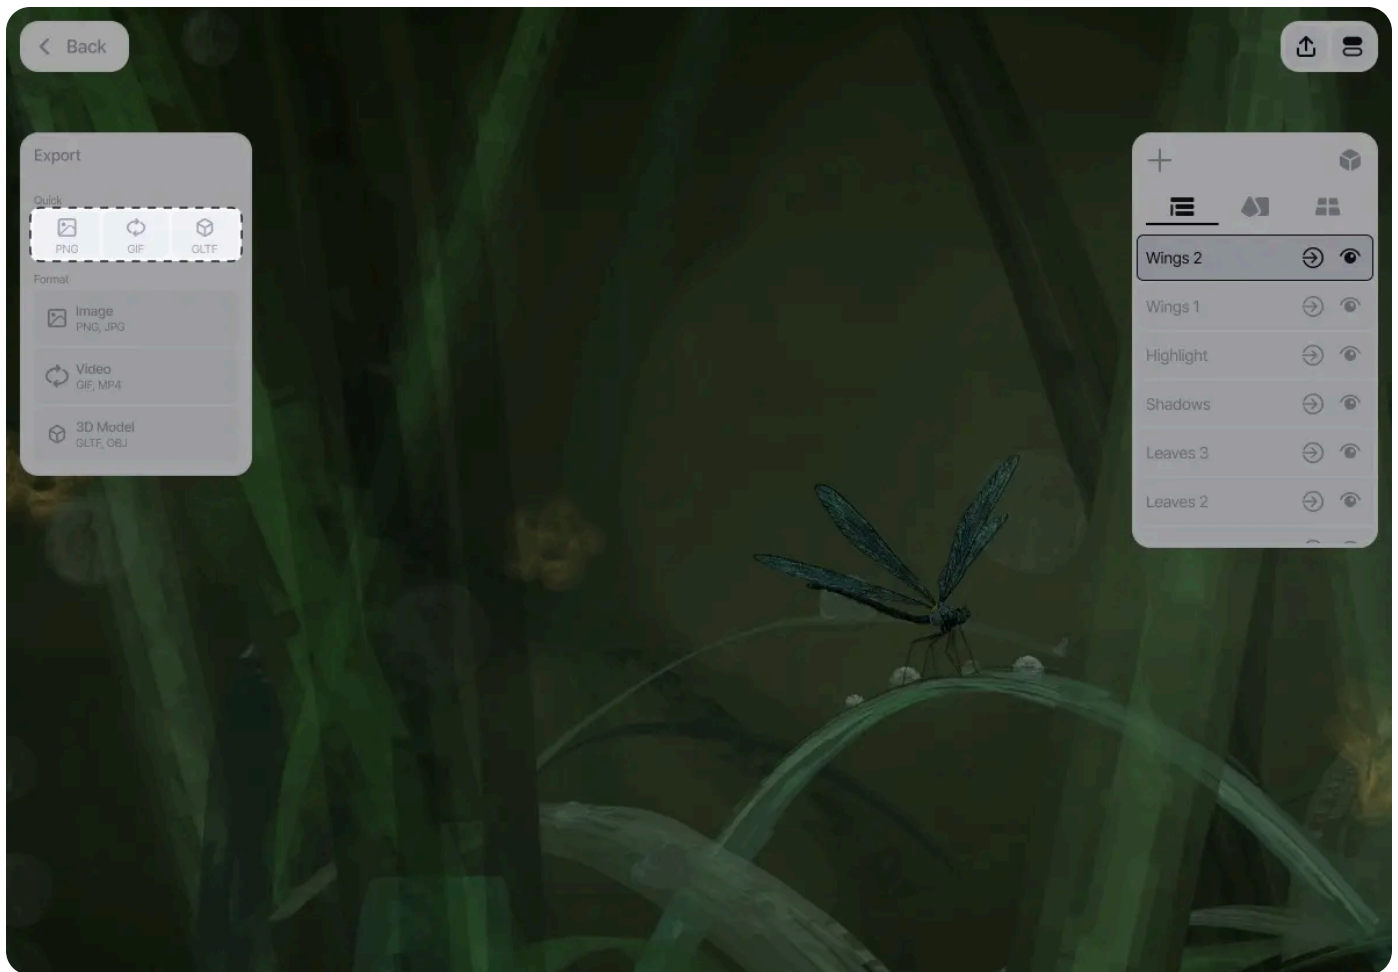

Export Tab

Quickly export your sketches to various platforms. Supports image, video, and 3D model exports.

Tap Export in System Menu

Tap export in the system menu at the top right of the screen to open the Export Tab.

Quick Export

Quickly export using preset values. You can quick export in PNG, GIF, and GLTF formats. GIFs are rendered as 360-degree turntable animations centered on the current orbit point.

Format

Export in more formats with detailed settings.

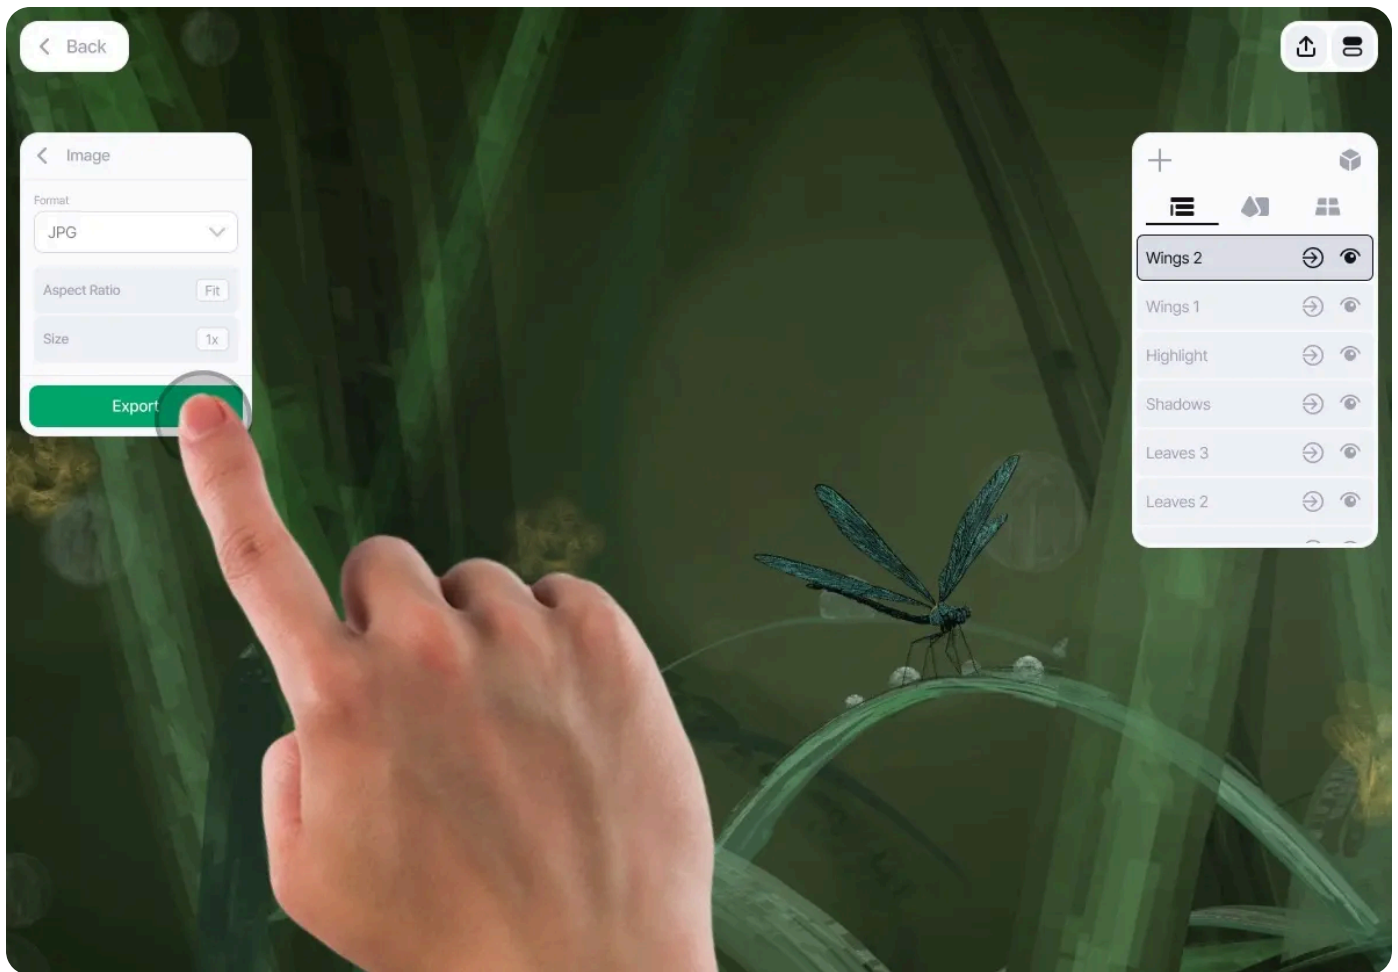

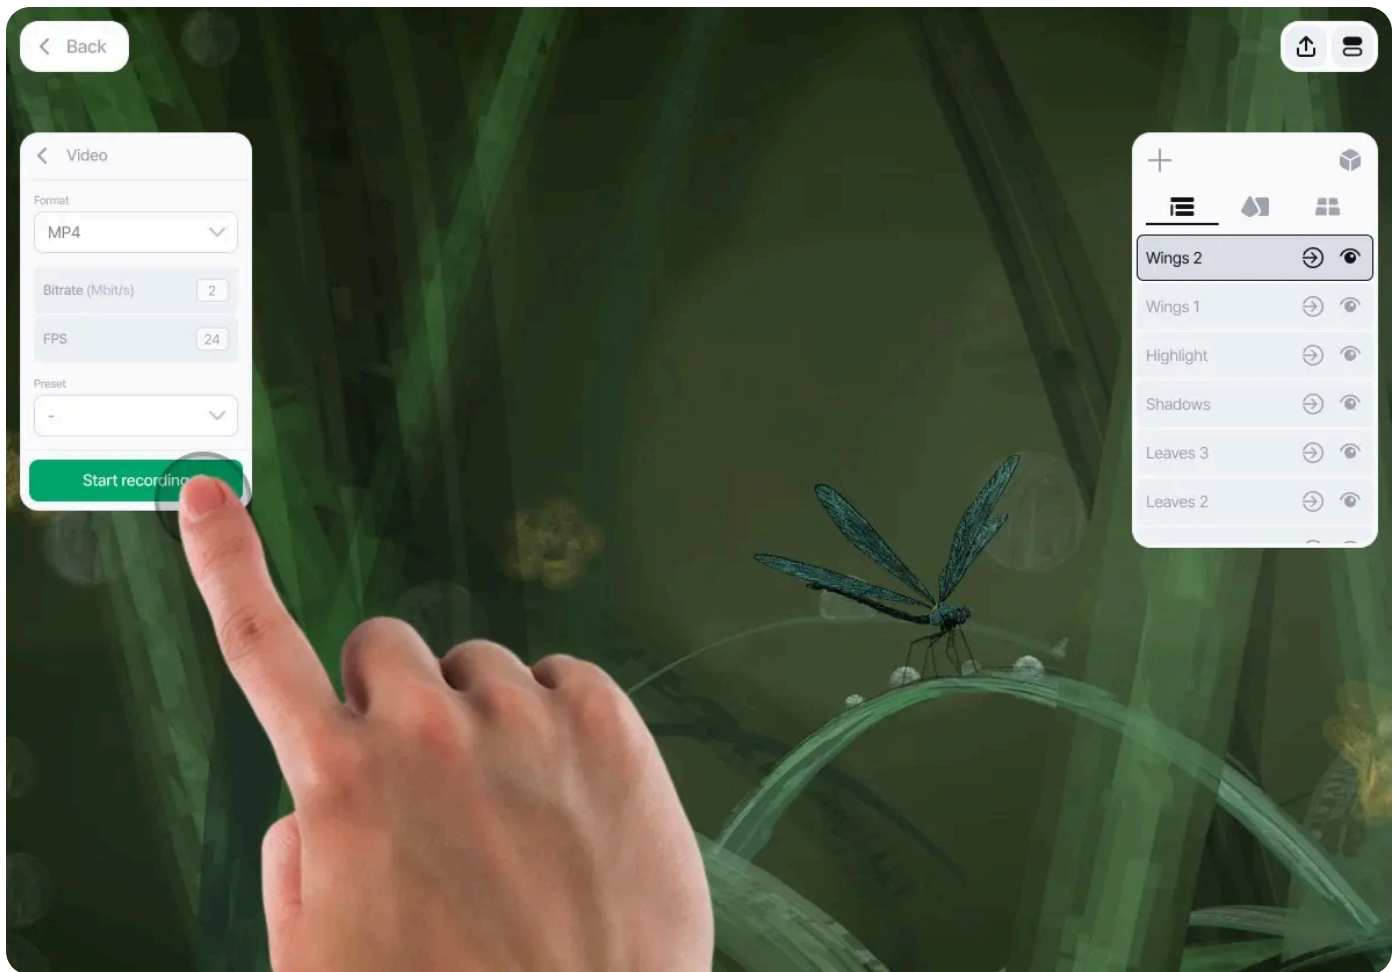

Image Export

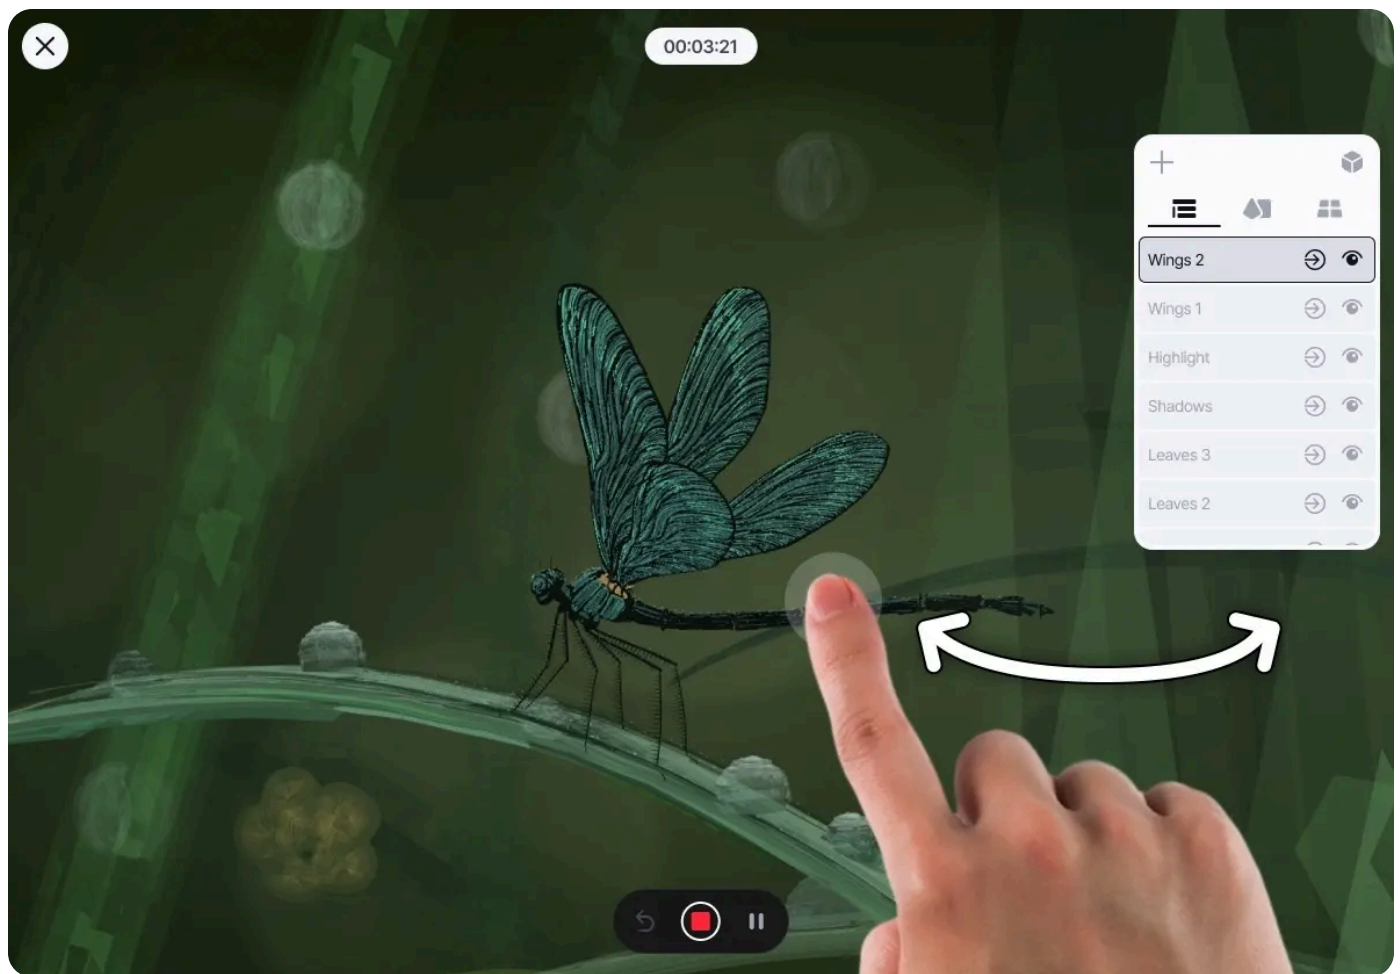

Export as PNG or JPG. You can select the aspect ratio and size of the image. If you export as PNG, a transparent background option is available. When the transparent background is toggled, effects are not applied.

Learn more about [Effects](#).

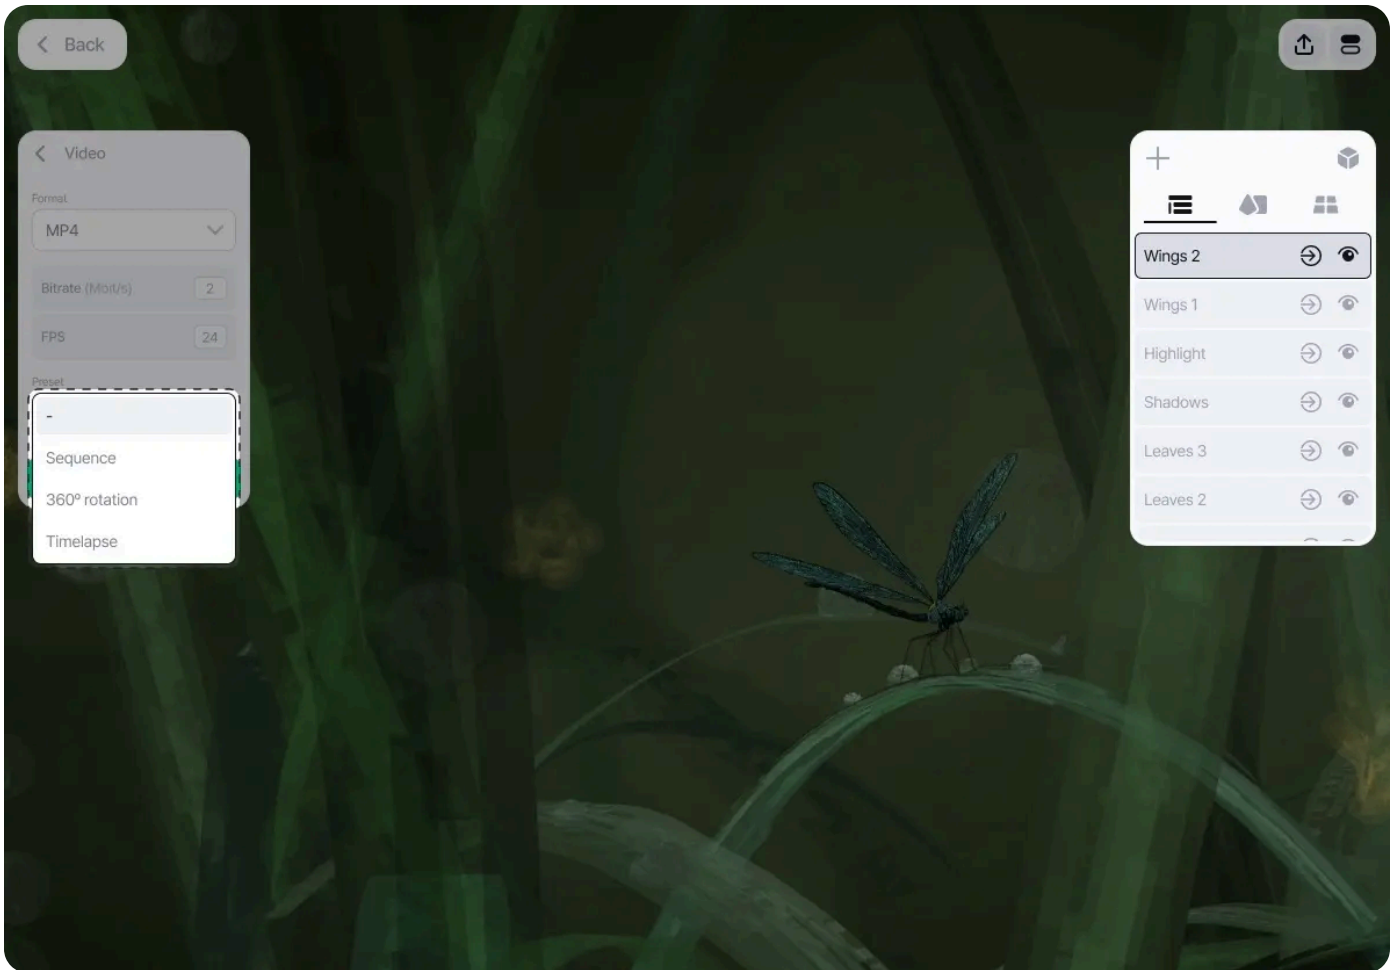

Video Export

Export as MP4 or GIF. When exporting as MP4, you can adjust the bitrate and frame rate.

MP4 Export

Tap 'Start Recording' and then tap the record button located at the bottom center of the screen. During recording, you can navigate freely and pause or cancel at any time. Tap the record button once again to stop the recording.

Preset

Tap the preset list to change the video preset. You can choose from Sequence, 360° Rotation, and Timelapse.

Sequence

Exports the sequence as an MP4. A sequence must be set up before exporting.

Learn more about [Sequences](#).

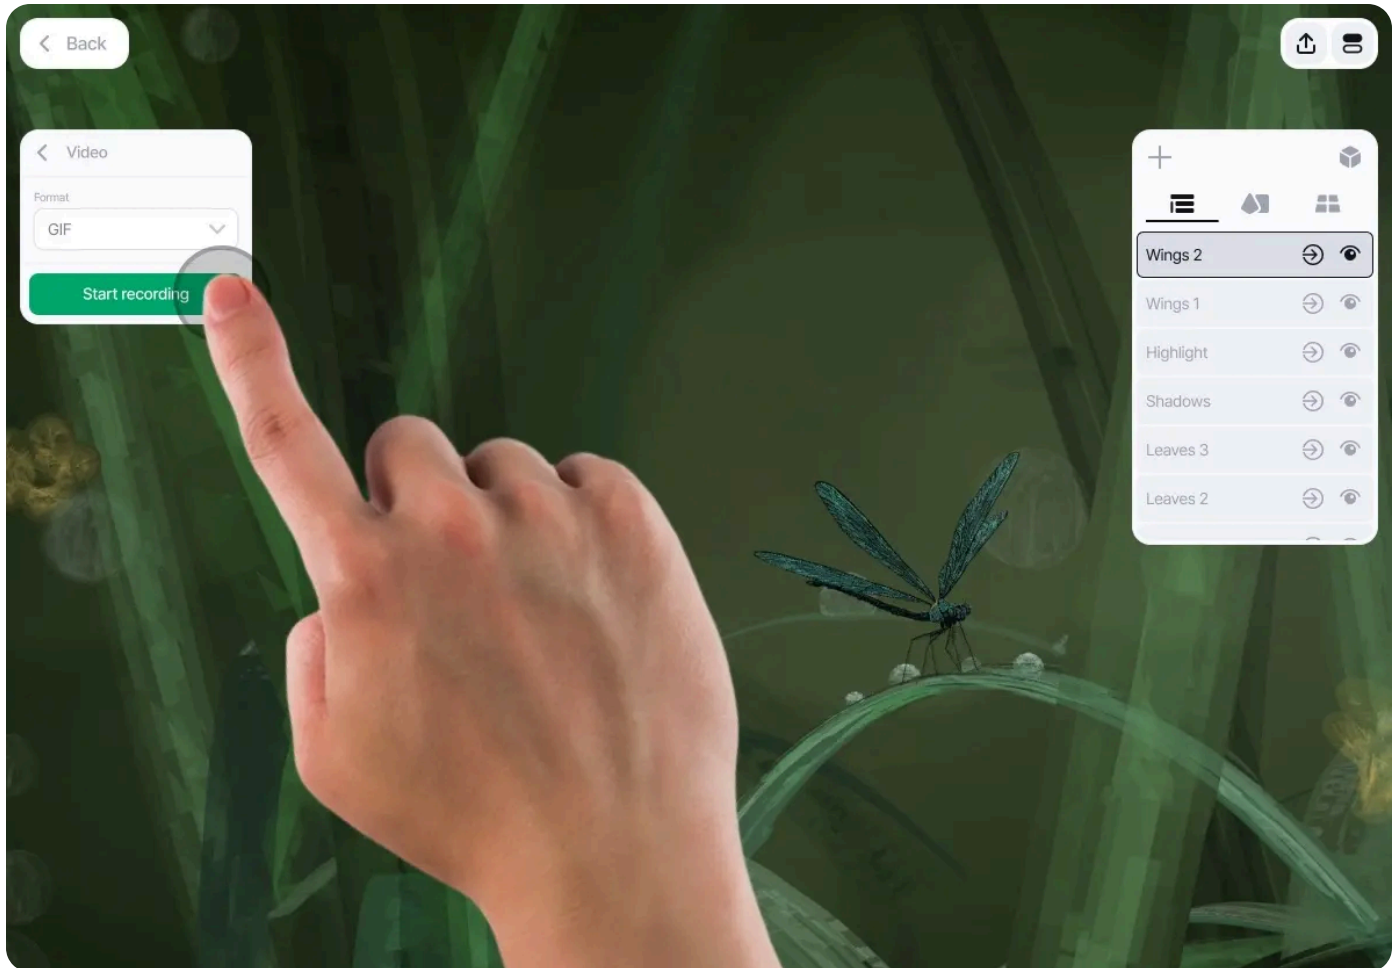

360° Rotation

Exports a 360-degree turntable animation. It follows the current orbit point.

Learn more about [Orbit Points](#).

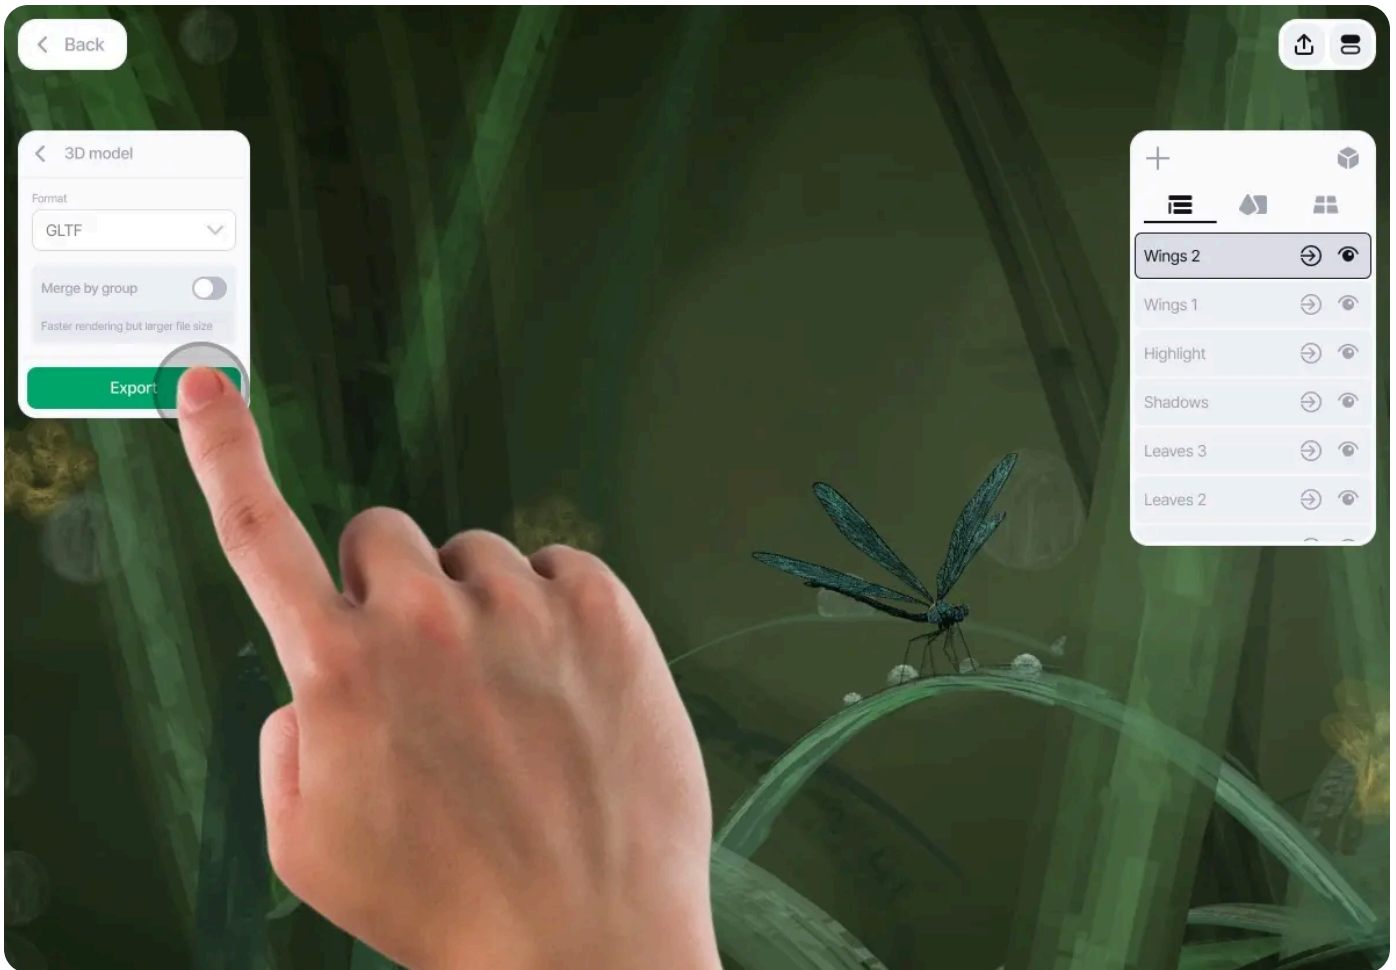

Timelapse

Exports a timelapse animation. The timelapse follows the group order, and you can navigate freely during recording.

GIF Export

GIF Export via Video Export exports the 360 turntable animation just like a Quick Export centered on the current orbit point.

3D Model Export

Export as OBJ or GLTF format. Only groups with visibility turned ON will be exported. If you want to export only specific parts of your artwork or sketch, hide the other groups. The GLTF format exports with baked vertex painting. For editing the exported OBJ or GLTF models in Blender, refer to [Blender Add-on](#).
