Edit and Apply

Learn how to edit your curves with liquify and apply the changes.

Edit and Distort

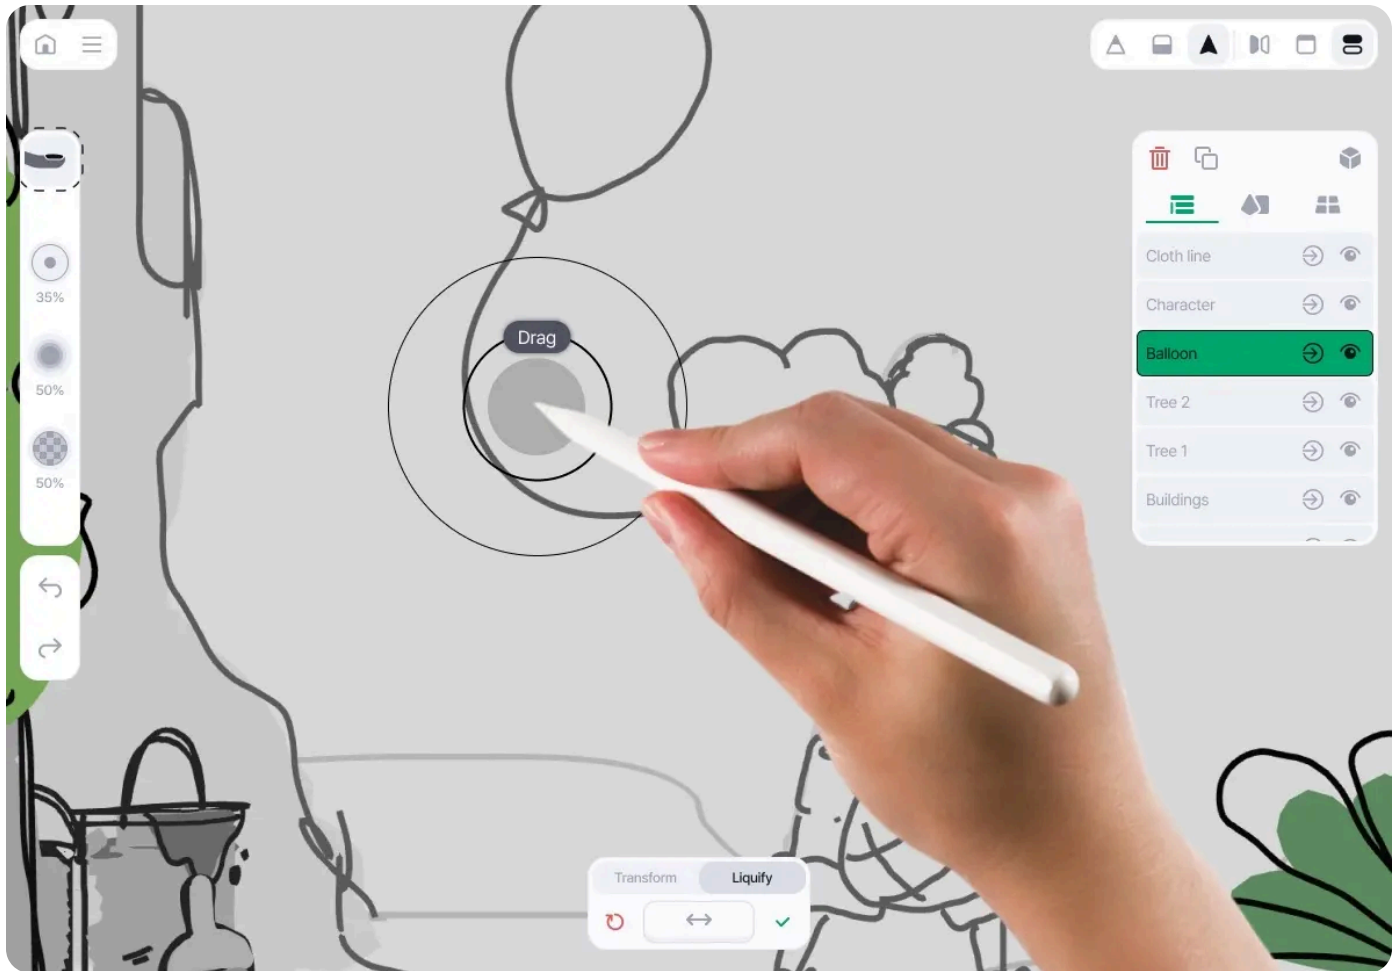

Liquify allows you to distort and reshape selected curves or drawings. You can create unique forms by distorting specific areas or make meticulous adjustments across the entire piece.

Press and Drag to Liquify

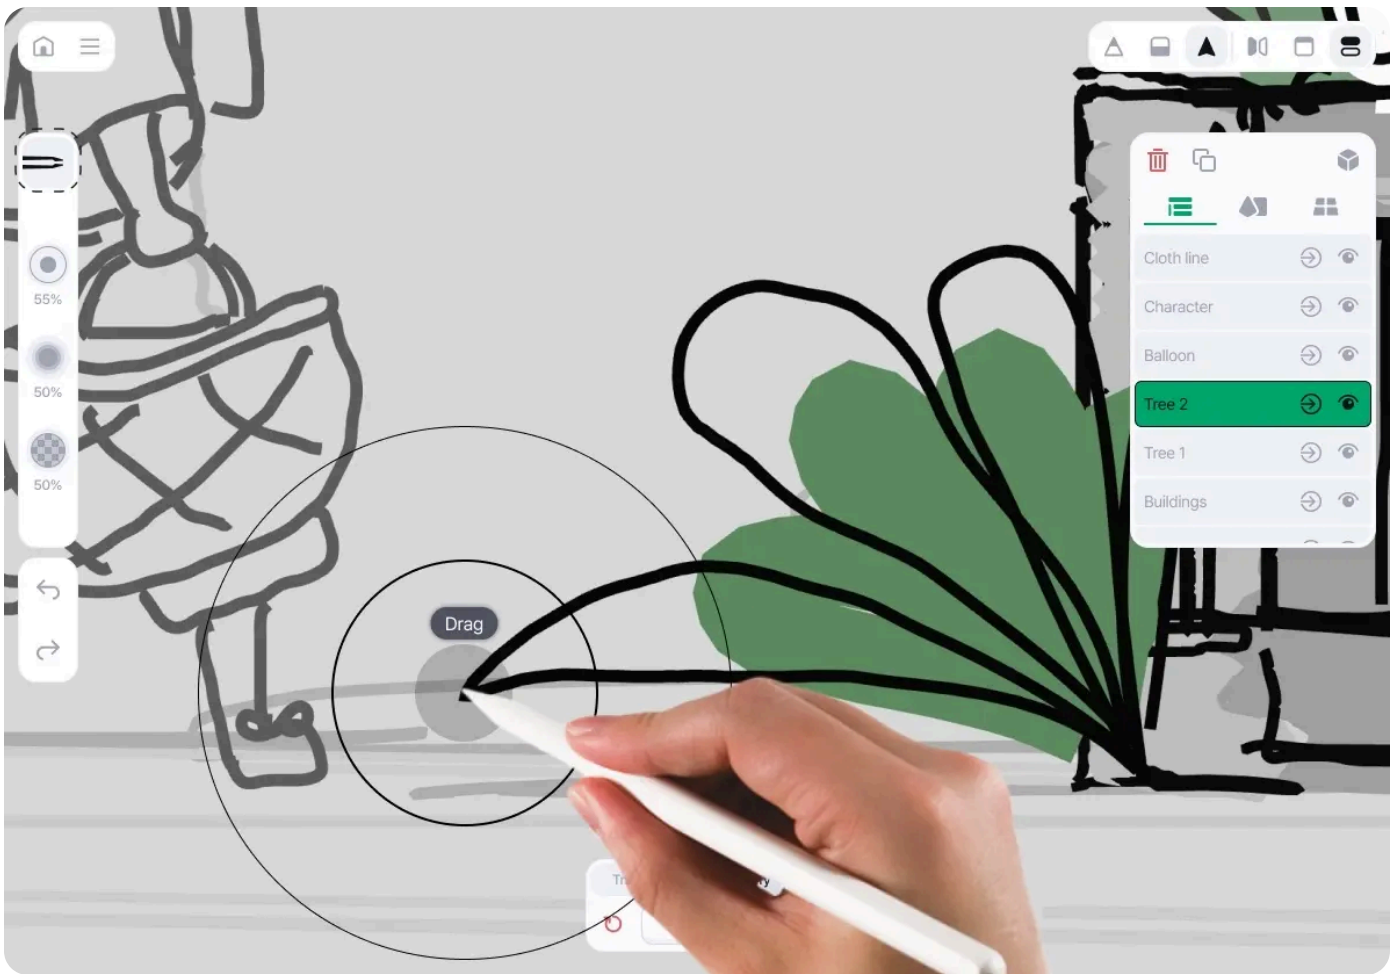

Press and drag with your pen to liquify your curves or drawings. The degree of distortion and the affected area depend on the size, range, and strength settings in the Liquify panel.

Learn more about the [Liquify Panel](#).

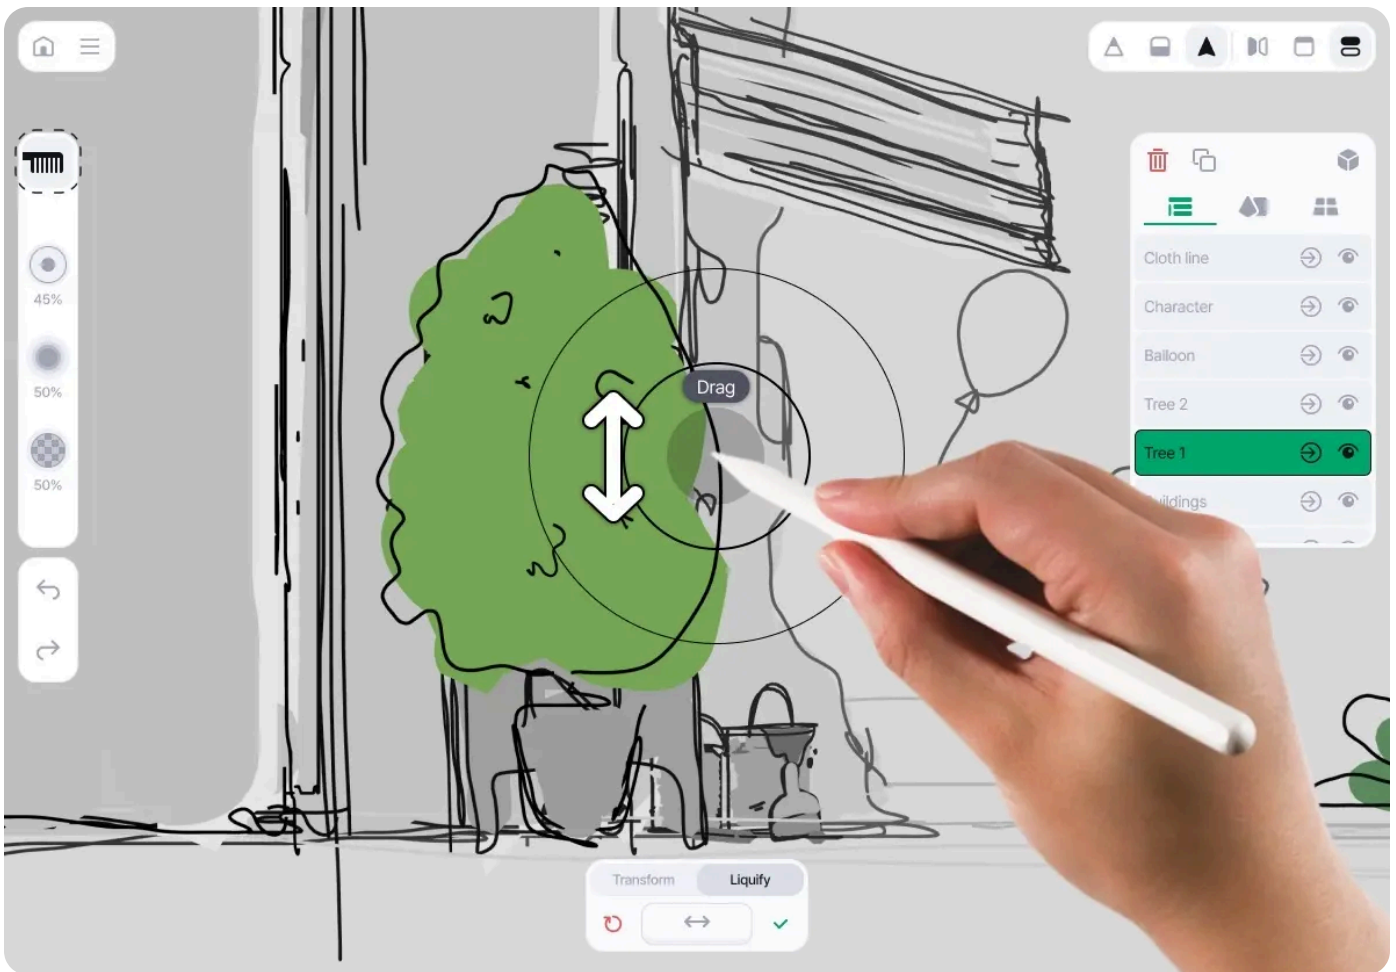

Push

Distorts naturally, as if pushing or pulling with a finger. Useful in most situations.

Pinch

Distorts sharply and precisely, as if pinching. Useful for extending or shrinking specific curves.

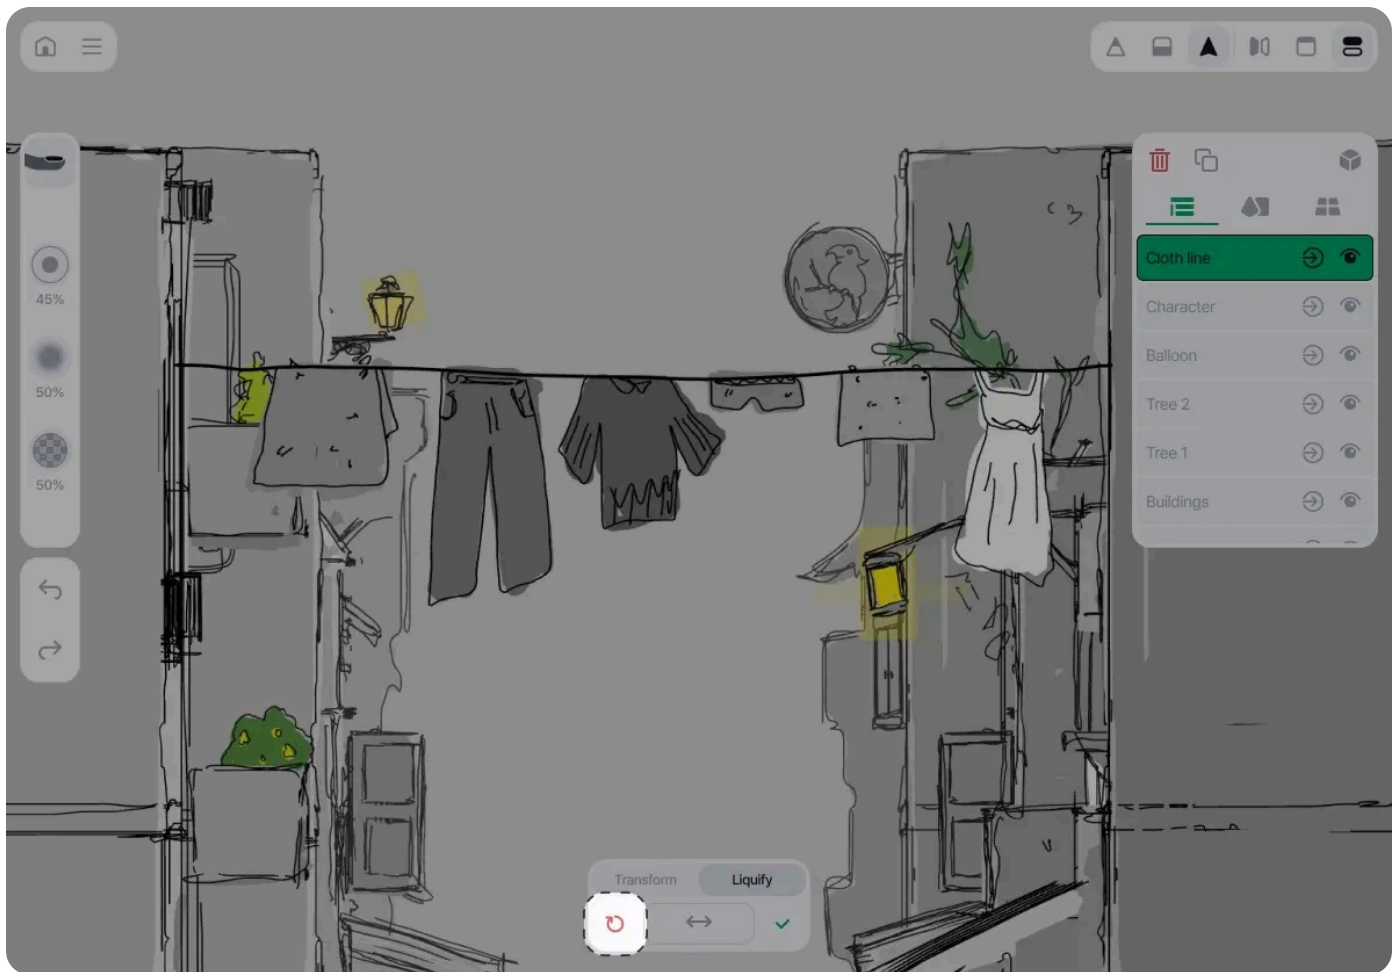

Comb

Gently smooths and aligns as if combing. Ideal for straightening wavy curves. Works best when used with a rubbing motion.

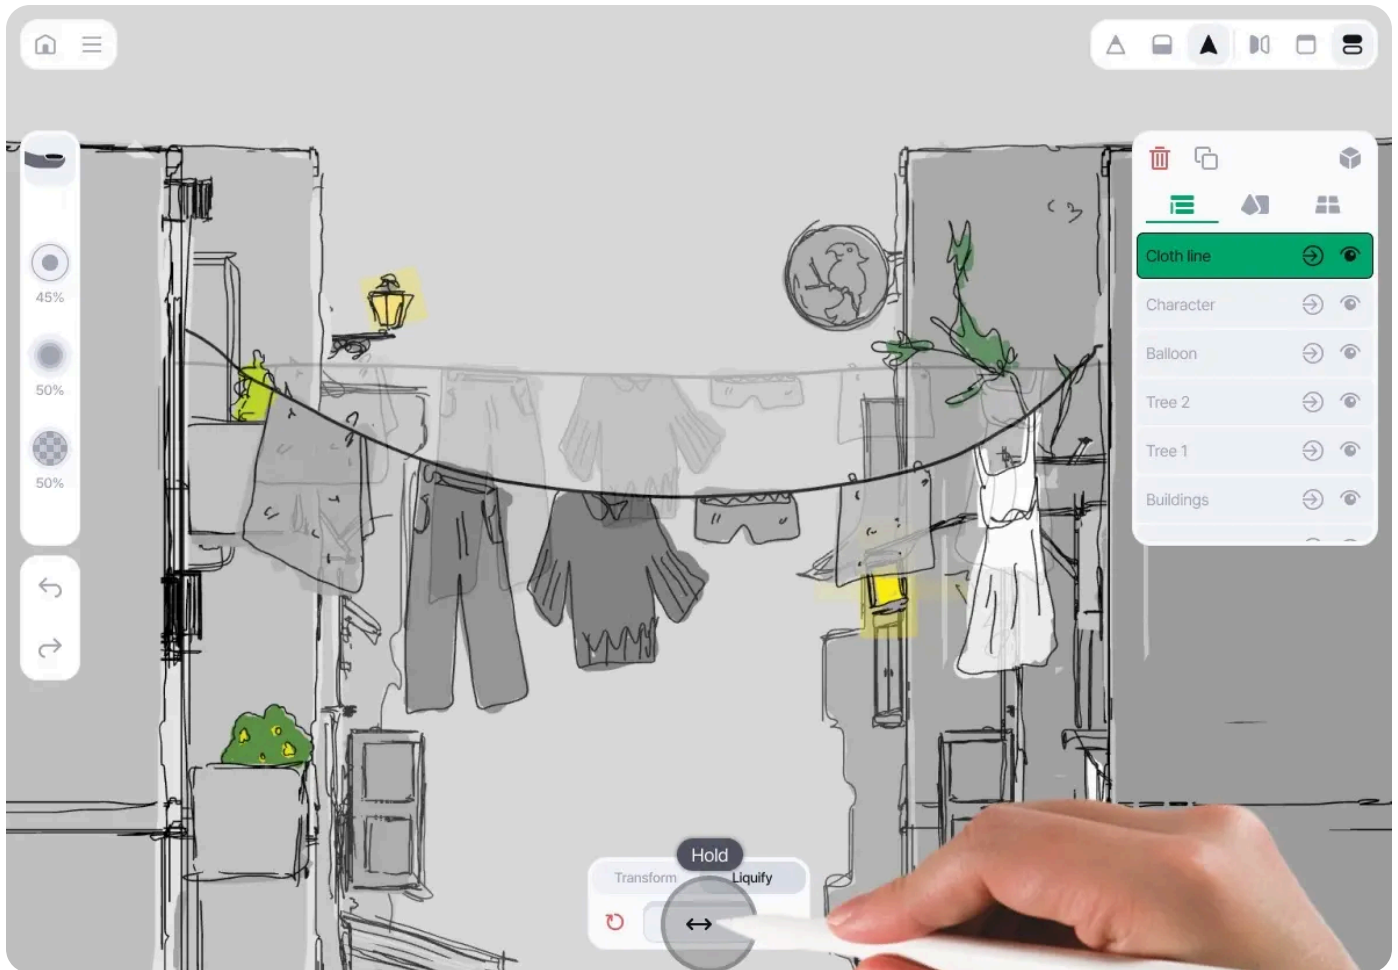

Compare and Apply

Comparing before and after changes is crucial to understanding the overall impact. Always compare before applying liquify.

Undo All

Tap the 'Undo All' icon on the left of the bottom context menu to revert to the state before liquify. To undo step by step, use the history panel.

Compare

Tap and hold 'Compare' in the center of the bottom context menu to view the curves before liquify.

Apply

Tap the checkbox icon on the right of the bottom context menu to apply all liquify changes.
